

**INDIA'S FIRST HYDROGEN
INHALATION MACHINE
MANUFACTURER**

COMPANY OVERVIEW

ABOUT US

Glad Hydrogen is a pioneering company based in India, dedicated to unlocking the therapeutic potential of molecular hydrogen. We offer innovative products designed to enhance your well-being, with a focus on hydrogen inhalation machines.

Glad Hydrogen, a leading innovator in Hydrogen inhalation therapy from India. We're not just manufacturers – we're passionate researchers dedicated to optimising this innovative technology.

Our team of medical experts works tirelessly to understand how Hydrogen Inhalation can benefit a wide range of conditions. We translate this knowledge into educational resources for our users, empowering them to experience the potential of Hydrogen therapy.

OUR MISSION

We are committed to the achievement and maintenance of excellence in education, research and healthcare using the extensive therapeutic potential of molecular hydrogen for the benefit of humanity. To revolutionise the healthcare industry by pioneering cutting-edge hydrogen inhalation machines, empowering individuals to lead healthier lives. With innovation, dedication, and a customer-centric approach, we aim to become a leading Indian brand that embraces global recognition and exports our devices worldwide.

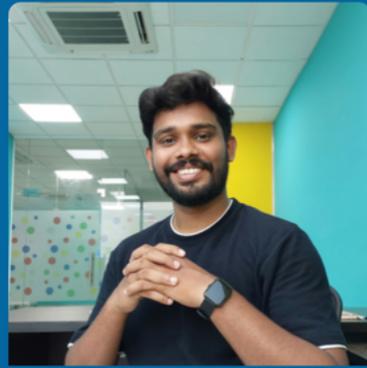

OUR VISION

To transform into a 30 Crore revenue company & creating 30 jobs within 3 years, while simultaneously building an Indian brand that resonates globally and exporting our innovative devices to every corner of the world. Open GLAD H2 EXPERIENCE CENTRE throughout all major cities of India to educate more people about the health benefits of molecular hydrogen. We also aim to build a “Made in India“ hydrogen inhalation machine company and to pave the way for job opportunities for young talented professionals.

OUR TEAM

Pious Sebastian
Founder & Managing Director

Naveen Johnson
Chief Operating Officer

Alex Joshy
Head- Research & Development

Dr Shikku Poulse
Molecular Hydrogen Therapy specialist

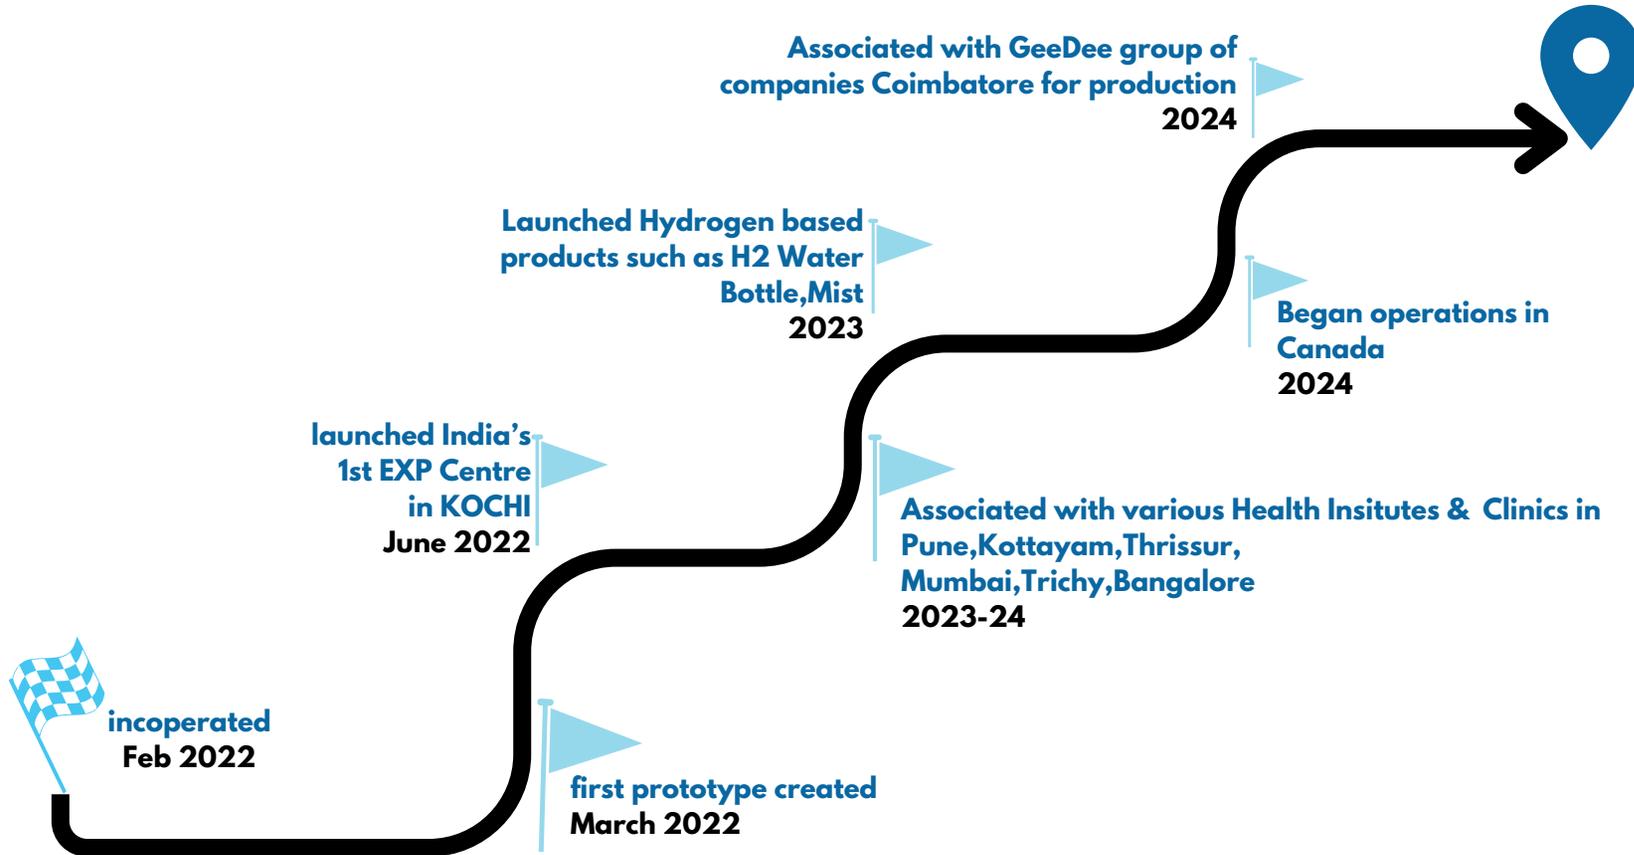

Dr. Lalith Kumar
Chief Consultant , Integrative & Preventive
Oncology, Molecular Hydrogen specialist

Cilvania Dominic
H2 Consultant - Glad Hydrogen

OUR HISTORY

“Destinations will arrive,
But Journey continues.....”

OUR WAY OF DOING

We are a pioneering company in India, dedicated to researching and working on making hydrogen therapy, an alternative medical therapy, accessible to people for a better lifestyle. Our team of medical and scientific experts tirelessly works on this innovative therapy. We are leaders in providing health and medical education, manufacturing H2 inhalation machines, and utilizing the potential benefits of hydrogen to enhance well-being and improve lives. Our operations are not limited to this; we have set up the **GLAD H2 EXPERIENCE CENTRE** to bring hydrogen therapy to the forefront, ensuring people can trust its benefits and making it affordable to reach a larger circle. Additionally, we are associated with various health institutes, clinics, research centers, wellness centers, and homecare facilities to provide alternative medical therapy for patients with specific health issues, managed by experts in each center and institute. We conduct seminars, awareness classes, and educate clients about hydrogen therapy before they purchase our products.

ACCOMPLISHMENTS

Understanding the role of hydrogen inhalation therapy

Dr Gauri Dubey, senior wellness consultant, states that oxidative stress affects overall health and well-being by causing cell and tissue damage due to an imbalance between free radicals and antioxidants in the body. "Free radicals are unstable molecules that can cause harm if present in excessive amounts. Anything that raises the number of free radicals in your body to unhealthy levels can cause oxidative stress," she says, and further shares a recent case of a patient who visited the clinic for muscle fatigue.

She says, "Neerja" was worried about her muscle fatigue and emotional well-being. Determined to improve her health, she visited the Chellaram Ultra Wellness Clinic. We explained to her that, along with an unhealthy diet and a lack of exercise, oxidative stress is a significant factor in her condition. The patient was advised to undergo eight sessions of hydrogen therapy (each lasting an hour) along with lifestyle modification."

Vishwas Walavalkar, COO of the Chellaram Ultra Wellness Clinic, adds that during hydrogen therapy, a gas mixture containing hydrogen gas is inhaled using a disposable cannula. "Molecular hydrogen is a fast-acting molecule that boosts energy to restore fatigued muscles, nerves, and brain cells. Molecular hydrogen exerts anti-oxidant, anti-inflammatory, and anti-

apoptotic (prevents cell death) effects. This treatment may also improve insulin production and action by reducing oxidative stress," he explains, adding that the patient underwent hydrogen therapy. "She found hydrogen therapy sessions to be comfortable and relaxing. She was delighted that the therapy, combined with lifestyle modifications, was improving her muscle fatigue, emotional well-being, and overall health," he concludes.

**“IMPROVING YOUR HEALTH
ONE BREATH AT A TIME”**

H2 inhalation is natural, non-toxic therapy with clinical and wellness indications. Hydrogen as a medical gas is also growing because it has immediate medical applications to help with many of the current health crises. Reducing oxidative stress improves, redox homeostasis and modulates signal transduction, protein phosphorylation, gene expression, which provides its anti-inflammatory, anti-allergy and anti-apoptotic protective effects.
